

# Conflict Minerals Policy

Global Policy

Owner: Clas Hansen

Approved: Clas Hansen

As part of Pixii's commitment to corporate responsibility and ethical business practices, we recognize the importance of addressing the issue of conflict minerals in the global supply chain. Conflict minerals, namely Tin, Tantalum, Tungsten, and Gold (3TG), as well as Cobalt and Lithium, have been linked to human rights violations in certain parts of the world, notably the Democratic Republic of Congo (DRC) and adjoining countries. Given Pixii's role in the energy storage industry and our reliance on third-party batteries and components, it is imperative that we ensure our supply chain is free from materials that contribute to conflict or human rights abuses.

## **Our commitment:**

Pixii is committed to sourcing components and materials responsibly and supports the efforts of our industry to eliminate human rights abuses related to the extraction of minerals. We aim to ensure that our products do not contain conflict minerals sourced from mines that finance or benefit armed groups in conflict-affected regions. Our policy aligns with the OECD Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas and is informed by the initiatives and standards set forth by relevant bodies, including the Responsible Minerals Initiative (RMI).

Pixii does not directly purchase raw minerals or component with raw minerals. However, we hold our suppliers to high standards of transparency and ethical conduct. To this end, we have implemented the following measures:

- We insist that our suppliers engage only with those who practice responsible sourcing, specifically from verified conflict-free mines in the DRC region.
- We expect our suppliers to require their suppliers of 3TG, cobalt and lithium to periodically undertake due diligence to verify both the country of origin and the sourcing of the materials used in products supplied to Pixii.
- Pixii supports and encourages participation in initiatives that verify smelters and refiners for their conflict-free status, and expect our suppliers to integrate these resources into their supply chains.
